## 表 3. 碳源對延胡索癒合組織生長之影響

Table 3. Effect of carbon source on callus growth of C. yanhusuo

Carbon source 3%*	Average fresh weight of callus (g)**
Fructose	1.146 <sup>c</sup>
Glucose	1.335 <sup>b</sup>
Maltose	$0.306^{d}$
Sucrose	1.594 <sup>a</sup>

<sup>\*</sup> Basal medium: MS salt with 0.9 % Difco agar, pH =  $5.7 \pm 0.1$ . Data was collected after 30 days of culture.

圖 18. 不同糖類對癒合組織生長之影響

(由左至右為 fructose、glucose、maltose 及 sucrose 培養基)

Figure 18. Effect of carbon source on callus growth of *C. yanhusuo* 

<sup>\*\*</sup> Same as Table 2.
