摘要

背景/目的 探討現況中醫針灸治療作業流程之照護安全。

方法 藉由本研究發展之問卷，便利取樣共回收 80 份問卷後，以 SPSS 分析所收集之資料。

結果 填答者自陳之針灸現況流程中存在許多病安之問題點，如入針時未落實處方的執行、灸過程中未監控、及無出針紀錄及針灸過程病歷資料保存方法等。

結論 針灸是中醫治療常用的處置，且國外醫療機構使用者眾，因此本研究建議主管機修鑑規則，以利醫療機構遵從，以改善其現有針灸處置流程，維護病人安全，及提升醫護品質。

關鍵詞：針灸、中西醫學整合、病人安全

Abstract

Background/Purpose. To investigate the current treatment processes of Chinese medicine acupuncture from the perspective of caring safety and to indicate the discrepancy between the current regulated process of hospital accreditation.

Methods. Using the questionnaire developed by this study with convenient sampling, 80 questionnaires were returned. The SPSS was used to analyze the data collected.

Results. According to the accreditation standards for Chinese medicine hospital or the Chinese medicine department, the self-reported results from the respondents showed that the current acupuncture processes contained many problems of patient safety, such as did not follow doctors' orders to put needles in, did not monitor the entire acupuncture process, did not record the information of pulling out needles and had no methods to save those records.

Conclusion. Acupuncture is commonly used in traditional Chinese medicine. The members of the Chinese medicine committee of the Department of Health also began to concern about the safe acupuncture caring. This study suggests that the official institutes to modify the regulations of hospital accreditation, so that all Chinese medicine hospitals and clinics can follow and improve their existing processes in order to protect patient safety and enhance quality of health care.

Key words: acupuncture; Chinese and Western Medicine Integration; patient safety
